

# Aircraft On Ground (AOG)

Emergency deliveries of time-critical aircraft engine.

## The Challenge

A leading airline company in Europe sought a reliable logistics partner who could meet their time-critical transport requirements for an aircraft engine in the UK. The Freightline team understands that, if a plane is grounded for hours, significant costs are incurred, and the airline's schedule may be impacted.

## Our Strategy

**In every aircraft-on-ground (AOG) situation, an immediate solution is needed. This solution involves delivering the required spare parts to the technical team as soon as possible. This is a highly sensitive and time-critical operation, and it is essential to work with a logistics specialist who has a wealth of knowledge and experience in carrying out this type of delivery.**

Our expertise in time-critical transportation made it easy for us to understand our client's requirements.

We have strict guidelines that we follow to ensure successful delivery.

All our carriers have been thoroughly vetted to ensure they are capable of safely transporting aircraft engines while adhering to the strict regulations that enforce their secure movement. The engines require special vehicles which must be strapped before transport and the task must be supported by the most experienced staff in order to guarantee its successful completion.

**AVERAGE  
AOG COST  
£123K**
